

SAI SRINATH PUDUCHERI

SailPoint / IAM Developer

Hyderabad, India | +91 8897008834 | saisrinath0814@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

SailPoint IdentityIQ developer with 2+ years of experience automating enterprise Identity and Access Management (IAM) and Identity Governance for a large retail enterprise. Skilled in BeanShell rule and workflow development, Joiner-Mover-Leaver (JML) lifecycle automation, connector integration, and production support across SailPoint IIQ, Workday, Active Directory, and LDAP. Proven record of delivering provisioning automation at scale and resolving complex production incidents.

TECHNICAL SKILLS

IAM / IGA: SailPoint IdentityIQ 8.4, Identity Governance, JML Lifecycle Automation, Provisioning, Certifications, Access Reviews, RBAC, Role Mining, Birthright Access

Development: BeanShell, Java, Rules & Workflows, Custom Connectors, REST/SCIM/JDBC/Web Services Connectors, API Integration, OAuth

Directories & HR: Active Directory, LDAP (OpenDJ / Apache Directory Studio), Workday

Languages: Java, Python, C, C#/.NET, SQL, JavaScript, HTML, CSS

Platforms & Tools: GCP, Azure, ServiceNow, Splunk, Git, Apache Directory Studio

Concepts: Account Aggregation, Correlation, Reconciliation, Identity Refresh, Provisioning Plans, Lifecycle Events, Access Request, Audit & Compliance

PROFESSIONAL EXPERIENCE

SailPoint / IAM Developer

Jul 2024 – Present

Gap Inc.

Hyderabad, India

- Developed and maintained 20+ SailPoint IdentityIQ BeanShell rules and workflows automating the full Joiner-Mover-Leaver (JML) lifecycle and birthright access for 100,000+ identities across Workday, Active Directory, and LDAP, ensuring timely and accurate provisioning and deprovisioning.
- Built and deployed automated termination workflows integrating certificate revocation and downstream account disablement, strengthening the enterprise offboarding and security posture.
- Designed connector and API integrations (REST, SCIM, JDBC, Web Services, OAuth) extending provisioning automation to SaaS and security applications, automating AD group membership (CCure, Cerby) and configuring account aggregation, correlation, identity refresh, and provisioning plans across target systems.
- Engineered logon-inactivity and account-expiry governance rules with tiered reminder notifications and automated disablement, supporting access reviews, lifecycle events, and access-hygiene compliance at scale.
- Diagnosed and resolved high-impact production incidents (aggregation watermark loops, Hibernate session errors, attribute-mapping mismatches, SQL parameter-limit failures) and ran group reconciliation (CCure, L-Sudo) and disabled-account audits, restoring stability while meeting SLA targets.
- Authored automated audit and reconciliation reports across multiple target systems, following stage-first validation with full test cases, change records, and stakeholder communications for every deployment.

.NET Developer Intern

Jan 2024 – Jun 2024

Verisk Analytics

Hyderabad, India

- Completed a 6-month software engineering internship building and testing application features using C# and the .NET framework with SQL databases in an Agile team environment.

KEY PROJECTS

- Certificate Revocation Automation:** Integrated chained API-driven certificate revocation into the production termination workflow with consolidated audit logging.
- Logon Inactivity & Account Expiry Automation:** Built end-to-end rules for inactivity detection, tiered reminders, and automated disablement of vendor and franchise accounts.
- PM POSHAN Tracker (ML) & SIH 2021:** ML model trained on nutritional/calorie data to track student health; OCR-based text-extraction application.

EDUCATION

Bachelor of Engineering

2020 – 2024

Vasavi College of Engineering, Hyderabad | CGPA: 9.2

CERTIFICATIONS & COURSEWORK

- NPTEL – DSA & Programming (Python) | Cisco NetAcad – Introduction to Networks
